R-Check

R-Check

Geiger-Müller counter
R-Check is a highly sensitive radioactivity test equipment for accurate measuring of:

- Beta radiation
- X – ray radiation
- Gamma radiation

Thanks to the robust construction of the Geiger-Müller tube and the high sensitivity the radioactivity counter is very suitable for standard environmental measuring technique in building biology examinations.

Features

- high sensitivity and stability
- robust mechanical construction
- long term data storage and documentation of the measurement results as graphic
- printer interface on the basic device BPT 3010

As soon the R-Check connected to the basic version, the Geo-Scanner BPT 3010, the test software does automatically start and the description of the procedures shall be followed. After measurement all test results can be documented as a graphic by using a printer or PC.
